

Leveling Up Well

Just about the only thing consistent with technology is its inconsistency over time. Every day, every hour, millions of women and men seek to improve, redesign, and overhaul existing solutions. After 18 weeks of hard work and dedication, you will be well-versed in modern web development best practices. However, the details of these practices will soon become tomorrow's curiosity of history. The good news is that the greatest skill and value you offer to the tech field (or any other, for that matter) does not become obsolete! You will have ample opportunity to hone this skill in the many exercises, extra challenges, and projects in our curriculum. Namely, you will get better at...

...working with others effectively to find and solve problems in the face of uncertainty...

Of course, many sub-skills and qualities are implied in that sentence...

- Creating clearly defined goals
- Controlled reasoning and problem solving
- Consistent communication
- Sensitivity and empathy to the needs of others
- Leadership
- Discipline and drive
- Pragmatic learning
- Strategic planning
- Curiosity and experimentation
- Collaboration
- Measuring success
- Pacing yourself and self-care
- Evaluating the effectiveness of various approaches
- Seeking the right kind of help from the best resources

Your experience at Codeup will be more effective if you intentionally seek improvement in these areas.

The details of our curriculum are valued in the marketplace, but keep in mind that the struggle to overcome the challenges you will face will yield the greatest benefit.
